THE CHALLENGE

Legal AI adoption has a routing problem

Most firms send every request — simple or complex — to the same large language model.

Rising AI Spend

Premium-model pricing applied uniformly, even to high-volume administrative tasks.

Latency at Scale

Simple requests queue behind complex reasoning workloads, slowing every matter.

Governance Gaps

Limited visibility into which model touched which client's data, and when.

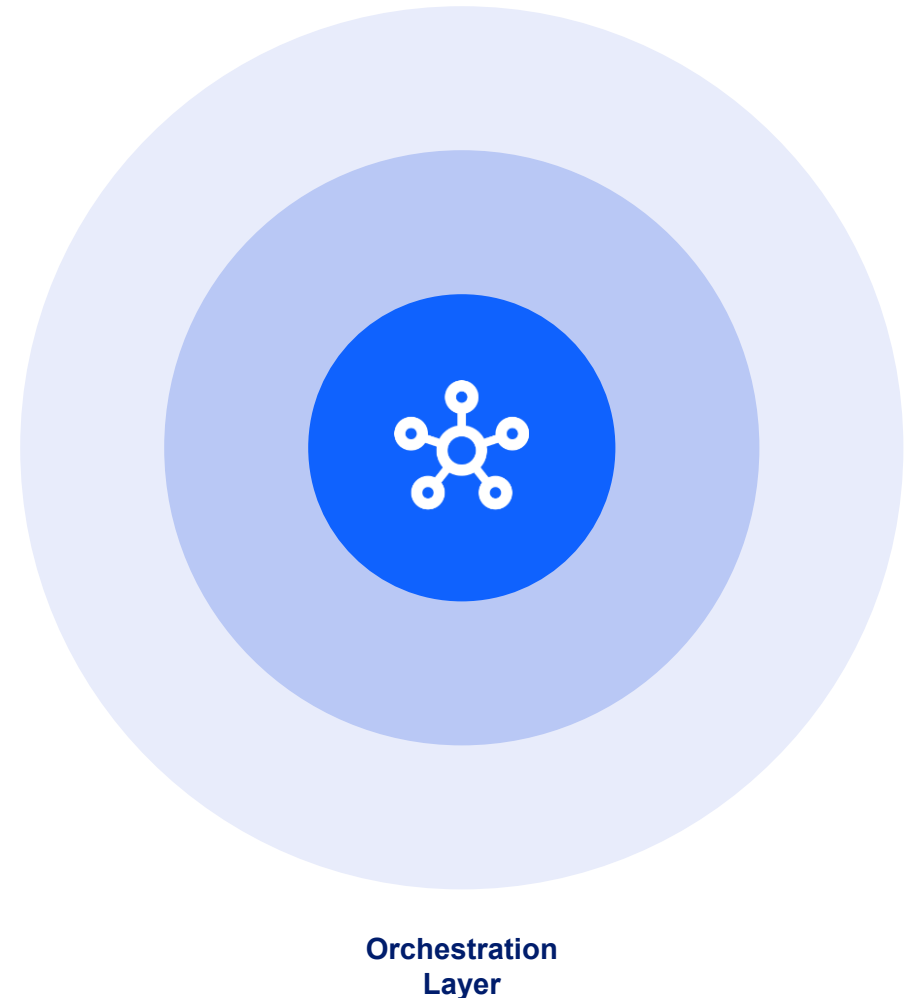

Tool Fragmentation

Point solutions across intake, DMS, research, and drafting don't share context.

One platform. Every AI capability. Orchestrated intelligently.

nTier.io unifies matter management, client intake, document drafting, and billing into a single workspace — then routes every AI task across local, private, and public models, plus your existing legal-tech stack, at the lowest cost that still meets your firm's risk and compliance bar.

- 1 Unified workspace for every role
- 3 AI tiers routed automatically
- 10+ Legal platforms orchestrated, not replaced

A five-layer architecture, purpose-built for law firms

01

Unified Legal Workspace

One interface for Partners, Associates, Paralegals, Legal Ops, and Knowledge teams — chat, email, documents, voice, and matter requests in, drafts and workflows out.

02

Enterprise AI Orchestration

Evaluates business context, matter context, risk, complexity, AI spend, security, and governance to determine the lowest-cost compliant execution path.

03

Three-Tier Intelligence

Micro, Small, and Large language models — matched automatically to task complexity and data sensitivity.

04

External AI & Application Marketplace

Calls out to best-in-class legal platforms only when internal models can't meet the quality threshold.

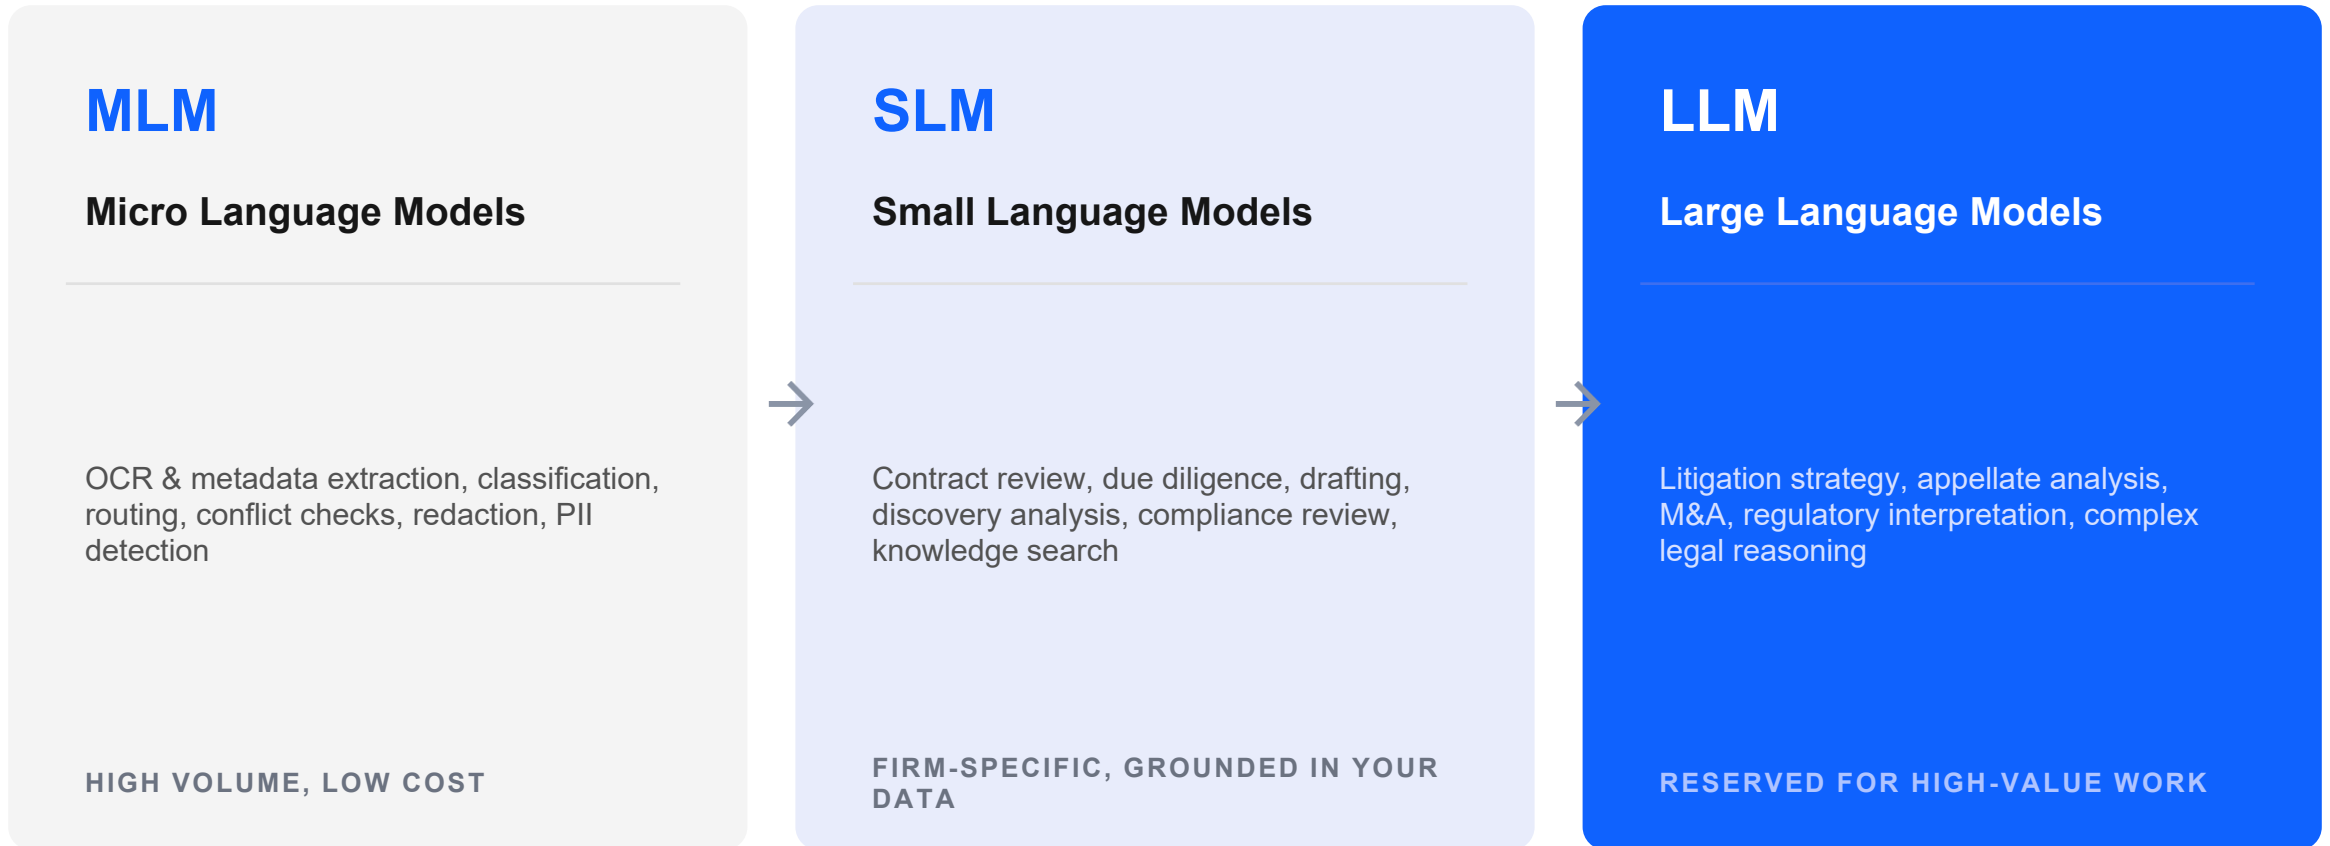

05

Human in the Loop

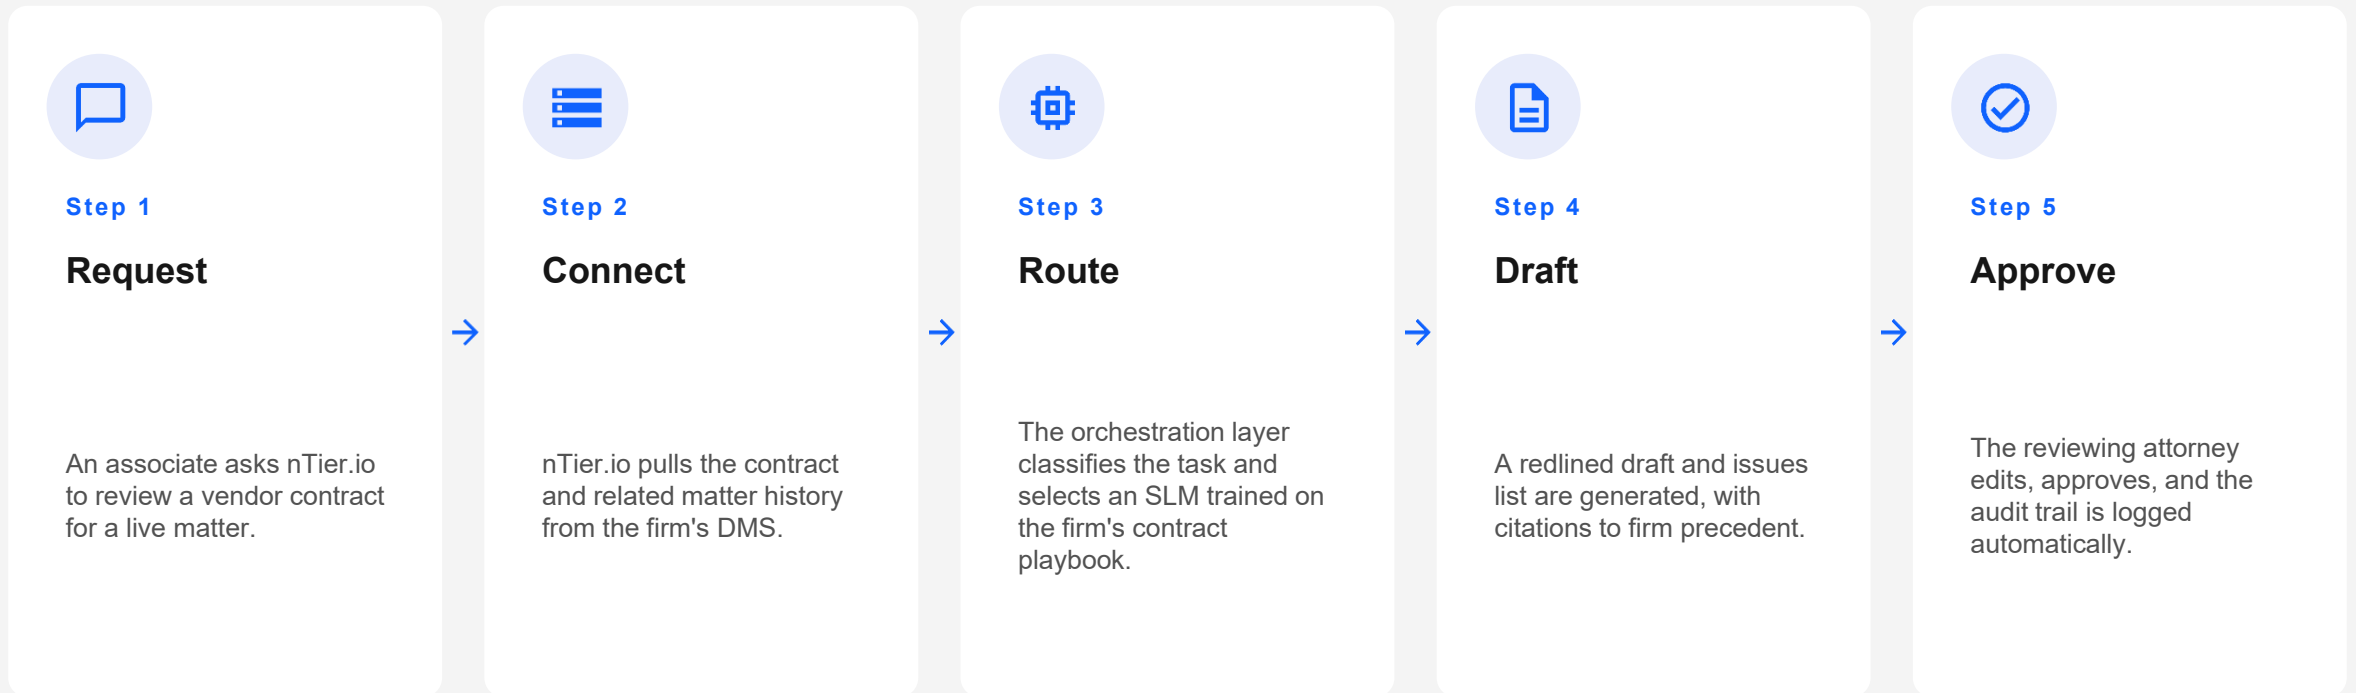

Every output is reviewed and approved by an attorney before it moves downstream — fully audited for governance, model choice, and cost.

The Three-Tier Intelligence Engine

Every request is matched to the smallest model that can do the job well — cutting cost without cutting quality.

From matter request to reviewed output — in one workflow

The Home Dashboard

A single entry point for every matter, workflow, and AI interaction.

Task	Model / Source	Status	Reviewed By
Contract clause extraction	SLM — Internal	Approved	Auto
Litigation memo — Doe v. Meridian	LLM — CoCounsel	Approved	T. Alvarez
Client PII redaction	MLM — Internal	Approved	Auto
M&A regulatory analysis	LLM — Internal	Pending	—

KEY FEATURES

Everything a modern law firm needs, in one workspace

AI Assistant

Conversational access to research, drafting, and summarization across every matter.

Knowledge Search

Retrieval grounded in the firm's own documents, precedent, and playbooks.

Document Drafting

Contract and pleading generation with clause-level citations to firm precedent.

Intelligent Routing

Automatic model selection by complexity, sensitivity, and cost.

AI Marketplace

Best-in-class legal platforms available on demand, orchestrated — not replaced.

AI Cost Dashboard

Real-time visibility into spend by matter, practice group, and model tier.

Governance Center

Policy controls, approval workflows, and full audit trails by design.

Role-Based Workspaces

Purpose-built views for Partners, Associates, Paralegals, and IT.

Built for the economics of AI at scale

Lower AI Spend

Routing high-volume tasks to smaller models cuts unnecessary premium-model usage.

Faster Turnaround

Right-sized models clear routine work quickly, freeing capacity for complex matters.

Higher Attorney Productivity

Attorneys spend more time on judgment and strategy, less on repetitive review.

Reduced Risk Exposure

Sensitive matters stay on tighter-controlled models by default, not by manual choice.

Full Transparency

Every AI decision — model, cost, and approver — is visible and auditable.

No Rip and Replace

Works with the DMS, research, and practice tools your firm already relies on.

Security and governance aren't an add-on

Governance is built into the orchestration layer itself — not bolted on afterward.

Data stays where policy says it should

Local and private models handle sensitive matters by default; public models are used only when the task allows it.

Every decision is auditable

Model choice, cost, and reviewer are logged automatically for every task, every matter.

Human approval, always

No AI output moves downstream into a matter file without attorney sign-off.

Policy-driven, not ad hoc

Firm-wide governance rules apply consistently, regardless of which tier or platform handles the task.

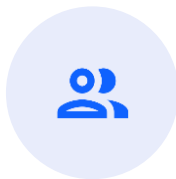

BUILT FOR EVERY ROLE

One platform, purpose-built views for every seat in the firm

Partners

Portfolio-level visibility into matters, AI spend, and risk exposure.

Associates

Faster research, drafting, and review — with citations to firm precedent.

Paralegals

Streamlined intake, document assembly, and workflow tracking.

Legal Operations

Cost dashboards and workflow analytics across practice groups.

Knowledge Managers

Curated retrieval across the firm's full knowledge base.

IT Administrators

Central control over integrations, access, and platform configuration.

AI Governance Officers

Policy authoring, approval routing, and full audit visibility.
